# NFC Mode & Peer to Peer & Vkey Instruction

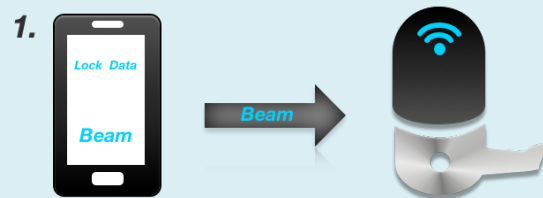

## For the Host- NFC Mode Smart Card Read / Write

DSS APP encrypted the Virtual key when the access code written into the NFC card under Write mode. This card can be applied on DSS NFC series smart lock. In addition, as long as you have a NFC built-in cell phone, you can easily manage your house or small hotel in effort to achieve a small hotel managing system.

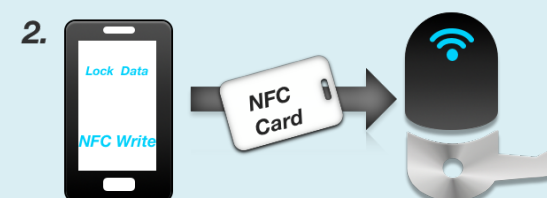

## For the Host- Peer to Peer Function (P2P)

Peer to Peer function is to pass the information into devices via NFC built-in cell phone. DSS simplify the operation procedure from keypad to DSS APP. You can program all setting on your cell phone and directly touch the keypad with your NFC built-in device to transit the programming data onto the door lock with a simple touch.

**P2P Function:** to use NFC phone Peer -to -Peer function to transit the programming data and setting.

**Smart card Launching:** Use NFC phone to launch NFC smart card to set up the smart locks.

## For the Guests- Vkey App

Vkey App is designed for Peer -to-Peer function. When the host produced access code by APP and send to the guest. The guest can download Vkey and paste the access code onto it. Then use their NFC cell phone to get access into the door.

How to use:

1. Open Vkey App and paste access code onto Vkey.
2. With Vkey APP opened, touch the lock with NFC phone and touch the screen to get access into the door.
